Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

"Purification and amino acid sequence of chicken liver cathepsin L.";
Biochemistry 26:5689-5695(1987).
-!- FUNCTION: Important for the overall degradation of proteins in
                                                                                                                                  lysosomes.

-!- CATALYTIC ACTIVITY: Specificity close to that of papain. As compared to cathepsin B, cathepsin L exhibits higher activity towards protein substrates, but has little activity on Z-Arg-Arg-NHMec, and no peptidyl-dipeptidase activity.
-!- SUBUNIT: Dimer of a heavy and a light chain linked by disulfide
                                                                                                                                                                                                                                                                                     PRINTS; PR00705; PAPAIN.

(ANTI-) ANTIALIS SARL.

Trehin Y; Terrasse G, Loria E,

WPI; 2002-750636/81. N-PSDB; AAL41281.

Antiallergic compositions containing an anti-histamine, a histamine synthesis inhibitor, and optionally an allergen or nucleic acid coding for the allergen.

Claim 13; Page 30-31; 32pp; French.

The invention relates to antiallergic compositions containing an anti-histamine, a histamine synthesis inhibitor, and optionally an allergen or isolated nucleic acid molecule that has at least one polymucleotide sequence coding for the allergen, together with a pharmaceutical carrier.

                                                                                                                                                                                                                                                       ઠે
                                                                                                                                                                                                                                                                                                      ઠે
```

The present invention relates to an antiallergic pharmaceutical

Claim 7; Page 27-28; 33pp; French

```
ö
composition (I) comprising a pharmaceutical carrier containing an active agent combination of at least two of; an allergen; an antihistemaine; and a histamine synthesis inhibitor. (I) is used for treating or preventing allergic hypersensitivity reactions, especially allergic asthma, allergic trinitis or allergic atopic eczema, in babies, children or adults. The present sequence is cysteine protease from Dermatophagoides pteronyssinus, which was used as an allergen in the invention
                                                                                                                                                                                                                                                                                              120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8
                                                                                                                                     The invention relates to an isolated peptide of the major protein allergens of the genus Dermatophagoides, which comprises at least one T call group of a protein allergen from Der p (DP) 1, DP II, Der f (DF) I or DF II. The isolated peptide comprises at least two regions, each cregion comprising at least one T cell group of a protein allergen of the genus Dermatophagoides. The regions are derived from the same or different protein allergens of the genus Dermatophagoides. The peptides are useful for treating house dust mite allergy in humans. The peptides are also useful for detecting or diagnosing sensitivity to house dust the reapeutic properties as the naturally-occurring allergen, but have reduced side effects, and increased solubility and stability. The present sequence represents an allergenic protein from Dermatophagoides from which the T-cell epitope containing peptides are derived, a polymorphic variant of Der p I. Note: The present sequence is not shown in the specification but is derived from the Der p I sequence shown in figure 22
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ELVDCASQHGCHGDTIPRGIEYIQHNGVVQESYYRYVAREQSCRRPNAQRFGISNYCQIY 120

The present invention describes a method for the production of a recombinant mite Group 1 protein (I). The method comprises culturing a method/trophic yeast microorganism transformed with a nucleic acid molecule (II) encoding (I), and recovering (I), or culturing Escherichia coli transformed with (II) under conditions in which (I) forms an inclusion body, and recovering inclusion body, and recovering comprising (a) contacting (I) with a putative igs-containing substance of comprising (a) contacting (I) with a putative igs-containing substance to form a complex between (I) and Igs; and (b) determining the presence of reactive with (I) by detecting the complex, where the presence of reactive igs is indicative of mite allergy in the animal. (I) is useful for detecting mite allergy in an animal, or in a composition to reduce allergic response to a mite Group I protein in a mite allergic animal.

(I) is also useful in a composition for treating or preventing allergic, infectious or other diseases. AAM22334 to AAM2234 and AAB98326 to AAB98349 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180

                                                                                                                                  23-MAY-2002
   The invention relates to an isolated peptide of the major protein allergens of the genus Dermatophagoides, which comprises at least one T cell group of a protein allergen from Der p (DP) I, DP II, Der f (DP) I cell group of a protein allergen from Ber b (DP) I, DP II, Der f (DP) I cell group of a protein allergen comprises at least two regions, each region comprising at least one T cell group of a protein allergen of the region are derived from the same or different protein allergens of the genus Dermatophagoides. The regions are derived from the same or different protein allergens of the genus Dermatophagoides in peptides are useful for treating house dust mite allergen have similar or enhanced therapeutic properties as the naturally-occurring allergen, but have reduced side effects, and increased solubility and stability. The present sequence represents an allergenic protein from Dermatophagoides from which the T-cell epitope containing peptides are derived, a polymorphic variant of Der p I. Note: The present sequence is not shown in the specification but is derived from the Der p I sequence shown in figure 22
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ELVDCASQHGCHGDTIPRGIEYIQHNGVVQESYYRYVAREQSCRRPNAQRFGISNYCQIY 120

The invention relates to a recombinant allergen (I) which is a mutant of a naturally occurring allergen, where the mutant allergen has at least contributions, which each reduce the specific immunoglobulin E (19E) binding capability of the maturally occurring allergen as compared to the IgE binding capability of the naturally occurring allergen, where each primary mutation is a substitution of one surface-exposed amino acid residue with another residue, which does not occur in the same position in the amino acid sequence of any known homologous protein within the taxon are appeared from which the naturally occurring allergen originates, and each primary mutation is spaced from each other primary mutation by at least 15 Angstrom, and the primary mutations are placed in such a least so more of the primary mutations are placed in such a least so comprising two or more of the recombinant allergens, where the variant comprising two or more of the recombinant allergens, where the variant of absent in at least one of the other variants, and for each variant no secondary mutation; a DNA sequence encoding the recombinant allergens or is derivative, partial sequence or degenerated sequence, or a comprising the DNA and a host call comprising the comprising the DNA and a host call epitops; an expression vector comprising the DNA and a host call epitops; an expression vector comprising the DNA and a host call epitops; or in expression vector comprising the DNA and a host call epitops; or in expression vector comprising the DNA and a host call epitops; or in expression vector comprising the DNA and a host call comprising the recombinant allergen is useful as a pharmaceutical for preventing and/or treating allergy or in a subject, where an IgE containing sample of the subject is mixed with the sample and the recombinant allergen and assessed for the level or for the recombinant allergen and assessed for the recombinant allergen or compositions are useful for preventing an immune response in the ample or compositions are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to a method for production of a recombinant protein allergen from an acarid of the genera Dermatophagoides or Buroglyphus. The allergens and also antibodies raised against them, are useful for diagnosis and treatment of allergies to house dust mites. When expressed in plants, allergens are synthesized and matured to biologically active form, with essentially the same pattern of glycosylation as the native protein. Recombinant expression provides a pure protein; contrast complex mixtures of allergens currently used. The present sequence represents Der pl allergen.

The contiguous overlapping peptide fragments further result in lower levels of IgE stimulation activity. The lower levels of IgE stimulation activity. The lower levels of IgE stimulation activity are zero or weak. The contiguous overlapping peptide fragments further result in a decrease in T-cell response upon subsequent exposure to the allergen, thus, modulating an immune response in the patients, who are hypersensitive to the allergen. A composition of the invention has antiallergic activity, and may have a use in gene therapy, and as a vaccine. The composition and methods are useful for preventing or lreating IgE-mediated allergies. The present sequence represents an allergen of the invention, dust mite Der p 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New compositions including contiguous overlapping peptide fragments that form an entire amino acid sequence of an allergen (e.g. bee venom or birch pollen allergen), useful for preventing or treating IgE-mediated

ö
genus Dermatophagoides. The regions are derived from the same or different protein allergens of the genus Dermatophagoides. The peptides are useful for treating house dust mite allergy in humans. The peptides are also useful for detecting or diagnosing sensitivity to house dust mite protein allergens. The present peptides have similar or enhanced therapeutic properties as the naturally-occurring allergen, but have reduced side effects, and increased solubility and stability. The present sequence represents an allergenic protein from Dermatophagoides from which the T-cell epitope containing peptides are derived, a polymorphic variant of Dar p I. Note: The present sequence is not shown in the specification but is derived from the Der p I sequence shown in figure 22

The invention claimers to a recombinant aniengem of a mutually occurring allergem, where the mutant allergem has at least four primary mutations, which each reduce the specific immunoglobulin E (IGE) binding capability of the mutated allergem as compared to the IGE binding capability of the mutantal allergem, where each primary mutation is a substitution of one surface-exposed amino acid residue with another residue, which does not occur in the same position in the amino acid sequence of any known homologous protein within the taxonomic species from which the naturally occurring allergen originates, and each primary mutation is appaced from each other primary mutation by at least one circular surface region with a area of 800 anner that at least one circular surface region with a area of 800 and secondary mutation is spaced from each other primary mutation by at least one of the recombinant allergems, where the variant or comprising two or more of the other variants, and for each variant no secondary mutation is present within a radius of 15 Angstrom from each absent primary mutation; a DNA sequence encoding the recombinant allergen is defined by having at least one primary mutation, which is absent primary mutation; a DNA sequence encoding the recombinant allergen cor its derivative, partial sequence or degenerated sequence, or a sequence which hybridises to it under stringent conditions, where the corpusing the DNA and a host cell comprising the C vector. The recombinant allergem is useful as a pharmaceutical, for preparing a pharmaceutical for preventing and/or treating allergy, or in the recombinant allergem and the recombinant allergem and the recombinant allergem and the recombinant allergem and the recombinant allergem and the recombinant allergem and the recombinant allergem and the recombinant allergem and the recombinant allergem and the recombinant allergement of the recombinant allergement of the recombinant allergements of the recombinant allergements and the recombinant allergements of the recombi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 ELVDCASQHGCHGDTIPQGIEYIQHNGVVQESYYRYVAREQSCRRPNAQRFGISNYCQIY 120

                                                                                                                                                                                                                                 AAR52742 is a mature Der pI mite allergen. The mature protein can be used to detect sensitivity in an individual to house dust mite and to reduce the sensitivity of the individual. (Updated on 25-MAR-2003 to correct PN

The invention relates to a recombinant allergen (I) which is a mutant of a naturally occurring allergen, where the mutant allergen has at least cur primary mutations, which each reduce the specific immunoglobulin E (19E) binding capability of the mutated allergen as compared to the IgE binding capability of the maturally occurring allergen, where each binding capability of the naturally occurring allergen, where each creations with another residue, which does not occur in the same position in the amino acid sequence of any known homologous protein within the axonomic species from which the naturally occurring allergen originates, and each primary mutation is spaced from each other primary mutation by at least 15 Angetrom, and the primary mutation by at least no circular sufface region with a area of 800 Angetrom 2 comprises no mutation. Also included are a composition comprising two or more of the recombinant allergens, where the variant to secondary mutation is present within a radius of 15 Angetrom from each other primary mutation, and Na sequence encoding the recombinant allergen or its derivative, partial sequence or degenerated sequence, or a sequence which hybridises to it under stringent conditions, where the capterial sequence or degenerated sequence or hybridising the expression vector comprising the DNA and a host cell comprising the correspondent or a pharmaceutical for prevaring and/or trasting allergen is necessaring allergen is absent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 preparing a pharmaceutical for preventing and/or treating allergy, or in a diagnostic assay for assessing relevance, safety or outcome of therapy of a subject, where an IgE containing sample of the subject is mixed with the recombinant allergen and assessed for the level of reactivity between the IgE in the sample and the recombinant allergen. The recombinant a subject, for vaccination or treatment of a subject for the treatment of a subject the treatment, prevention or alleviation of allergic reactions in a subject
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          e.g. hay fever, rhinoconductivitis, rhinitis, asthma or systemic anaphylaxis. The present sequence represents a recombinant allergen of the invention. Note: The present sequence was not shown in the specification but was created by the indexer using information in the specification and the corresponding wild-type sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New recombinant mutant allergen, useful for preventing and/or treating allergy, comprises multiple mutations and reduced immunoglobulin E
                                              rhinoconductivitis; rhinitis; asthma; Systemic anaphylaxis; mutant; vaccine; antiallergic; B cell epitope.

The invention relates to a recombinant allergen (I) which is a mutant of a naturally occurring allergen, where the mutant allergen has at least for four primary mutations, which each reduce the specific immunoglobulin E (1gE) binding capability of the mutated allergen as compared to the igE binding capability of the naturally occurring allergen, where each is primary mutation is a substitution of one surface-exposed amino acid residue with another residue, which does not occur in the same position in the amino acid sequence of any known homologous protein within the taxonance species from which the naturally occurring allergen originates, and each primary mutation is spaced from each other primary mutation by at least 15 Angstrom and the primary mutations are placed in such a manner that at least one circular surface region with a area of 800 Angstrom 2 comprises no mutation. Also included are a composition comprising two or more of the recombinant allergens, where the variant

allergen is defined by having at least one primary mutation, which is absent in at least one of the other variants, and for each variant no secondary mutation is present within a radius of 15 Angstrom from each absent primary mutation; a DNA sequence encoding the recombinant allergen or its derivative, partial sequence or degenerated sequence, or a sequence which hybridises to it under stringent conditions, where the derivative, partial sequence of degenerated sequence, or a sequence encodes a peptide having at least one B cell epitope; an expression vector comprising the DNA and a host cell comprising the cyprenting a pharmaceutical, for preparing a pharmaceutical for preventing and/or treating allergy, or in a diagnostic assay for assessing relevance, seafety or outcome of therapy of a subject, where an IgE containing sample of the subject is mixed with the recombinant allergen and the recombinant allergen. The recombinant allergen or compositions are useful for generating an immune response in a subject. for vaccination or treatment of a subject or for the recombinant prevention or allery and the recombinant allergen. The prevention or allery and the recombinant allergen or subject. For vaccination or allery and the recombinant allergen or subject. The prevention or allery and the recombinant allergen or subject. C. g. hay fever, rhinoconductivitis, rhinitis, asthma or systemic anaphylaxis. The present sequence represents a recombinant allergen of the invention. Note: The present sequence was not shown in the specification but was created by the indexer using information in the specification and the corresponding wild-type sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 222 AA;

nbinant mutant allergen, useful for preventing and/or treating comprises multiple mutations and reduced immunoglobulin  $\boldsymbol{E}$ recombinant mutant binding affinity

Example 7; Page; 210pp; English.

The invention relates to a recombinant allergen (1) which is a mutant or a naturally occurring allergen, where the mutant allergen has a tleast (1925 binding capability of the mutated allergen as compared to the IgE binding capability of the mutatal allergen, where each compared to the IgE binding capability of the mutation of one surface-exposed amino acid residue with another residue, which does not occur in the same position or residue with another residue, which does not occur in the same position corner and acid sequence of any known homologous protein within the capability of the naturally occurring allergen originates, and each primary mutation is spaced from each other primary mutation by car least 15 Angstrom, and the primary mutations are placed in such a manner that at least one circular surface region with a area of 800 a manuar that at least one circular surface region with a area of 800 comprising two or more of the recombinant allergens, where the variant allergen is defined by having at least one primary mutation, which is absent in at least one of the other variants, and for each variant or secondary mutation is present within a radius of 15 Angstrom from each absent primary mutation; and Requence or degenerated sequence, or a capture of partial sequence or degenerated sequence, or a sequence encodes a peptide having at least one B cell comprising the certor. The recombinant allergen is useful as a pharmaceutical, for vector. The recombinant allergen is useful as a pharmaceutical, for preparing a pharmaceutical for preventing and/or treating allergy, or in the recombinant allergen and assessed for the level of reactivity between the IgE in the sample and the recombinant allergen or lasessessed for the level of recombinant allergen or lastened or a subject, for vaccination or allergen or lastened or lastened or subject is an in a subject or the recombinant allergen or lastened or subject or the recombinant allergen or lastened or lastened or subject is the recombinant allergen or lastened betwee invention relates to a recombinant allergen (I) which is a mutant of e.g. hay fever, rhinoconductivitis, rhinitis, asthma or systemic anaphylaxis. The present sequence represents a recombinant allergen of the invention. Note: The present sequence was not shown in the indexer using information in the specification but was created by the indexer using infespecification and the corresponding wild-type sequence

The invention relates to a recombinant allergen (I) which is a mutant of a naturally occurring allergen, where the mutant allergen has at least (four primary mutations, which each reduce the specific immunoglobulin E (19E) binding capability of the mutated allergen as compared to the IgE binding capability of the naturally occurring allergen, where each binding capability of the naturally occurring allergen, where each binding capability of the naturally occurring allergen, where each can dead by the amino acid sequence of any known homologous protein within the taxonomic species from which the naturally occurring allergen originates, at least 15 Angstrom, and the primary mutations are placed in such an each primary mutation, and the primary mutation by a least to expression or circular surface region with a area of 800 Angstrom 2 comprises no mutation. Also included are a composition comprising two or more of the recombinant allergens, where the variant allergen is defined by having at least one primary mutation, which is absent in at least one of the other variants, and for each variant no secondary mutation; a DNA sequence encodiary mutation; a DNA sequence encoding the recombinant allergen confidence, or a sequence which hybridises to it under stringent confidence, or a sequence encodes a peptide having at least one B cell epitope; and expression vector comprising the DNA and a host cell comprising the C vector. The recombinant allergen and assessed for the subject is mixed with the sample and the recombinant allergen and assessed for the level of reactivity between the ISE in the sample and the recombinant allergen or expression vector or preparing a pharmaceutical for preventing and/or treating allergen or composition or treatment of a subject or for the sample and the recombinant allergen and assessed for the level or for the subject or subject, for vaccinations are useful for assubject or for the subject or readers a subject or readers and subject or readers and subject or subject or readers and subject
